

Zero to Builder.

The 30-day AI roadmap.

A day-by-day plan to go from “curious about AI” to having actually built and shipped something. No coding background required. One small task a day.

WEEK 1 • DAYS 1-7 Understand ☐ ☐ ☐ ☐ ☐ ☐ ☐	WEEK 2 • DAYS 8-14 Automate ☐ ☐ ☐ ☐ ☐ ☐ ☐	WEEK 3 • DAYS 15-21 Build ☐ ☐ ☐ ☐ ☐ ☐ ☐	WEEK 4 • DAYS 22-30 Ship ☐ ☐ ☐ ☐ ☐ ☐ ☒ ☐ ☐
--	---	---	---

How to use this.

Do **one day at a time, in order**. Most days take 10–20 minutes. If you miss a day, don't restart, just pick up where you left off. Tick the box when it's done. **The point isn't speed, it's not stopping.**

WEEK 1 Understand *just play with it, no building yet*

- ☐ DAY 01 Open an AI chat tool (Claude, ChatGPT or Gemini all work). **Ask it to explain your job to a 10-year-old.** See how it answers.
- ☐ DAY 02 **Ask it to plan your whole day**, then actually follow the plan it gives you.
- ☐ DAY 03 Learn the word **prompt**: the message you type to the AI. Rewrite a vague question to say **what you want, who it's for, and how long**. Watch the answer get better.
- ☐ DAY 04 **Have it summarize** a long article, email or document you've been putting off.
- ☐ DAY 05 **Ask three different AI tools the same question**. Compare the answers side by side.
- ☐ DAY 06 Learn the word **hallucination**: when AI states something made-up with full confidence. **Ask it something you already know** and check it.
- ☐ DAY 07 Write down, in one sentence, **the most annoying repetitive task** in your life or work. You'll use it on Day 10.

WEEK 2 Automate *fix one real, annoying task*

- ☐ DAY 08 Sign up for a free automation tool (n8n or Zapier). **Automation** just means two apps talking to each other, so you don't do it by hand.
- ☐ DAY 09 **Watch one short beginner tutorial** for your tool. Don't build yet, just get oriented.
- ☐ DAY 10 Take your Day 7 task and break it into three parts: **what starts it, what happens in the middle, what “done” looks like**.
- ☐ DAY 11 Build just the **trigger**, the thing that kicks it off (“a new email arrives”, “a form gets submitted”).
- ☐ DAY 12 Add the **action**: what the automation should actually do once it's triggered.
- ☐ DAY 13 **Turn it on and test it with real data**. Expect it to break the first time. That's normal, not a sign you did something wrong.
- ☐ DAY 14 Fix whatever broke. Once it runs clean once, **you've automated your first real task**. Write it down.

WEEK 3

Build *make one tiny project*

- ☐ DAY 15 Install an AI coding tool (Cursor is a solid free option). It puts an AI assistant right inside the place you write code.
- ☐ DAY 16 **Pick something small:** a personal to-do list, a one-page site about you, or a tiny tool for one specific annoyance.
- ☐ DAY 17 **Describe it in plain English**, like you're explaining it to a person, and let the AI write the first version.
- ☐ DAY 18 Run it. It probably won't work perfectly the first time. **That's expected, not a setback.**
- ☐ DAY 19 **Copy any error message and paste it straight back into the AI.** Repeat until it runs cleanly.
- ☐ DAY 20 Add one small feature you didn't originally ask for. This is where you go from following instructions to **steering**.
- ☐ DAY 21 **Show it to one person.** Watch them use it without your help and notice exactly where they get confused.

WEEK 4

Ship *put it online, then tell people*

- ☐ DAY 22 Fix whatever confused the person from Day 21.
- ☐ DAY 23 Learn the word **deploy**: putting your project on the internet so anyone can open it with a link.
- ☐ DAY 24 **Deploy it with a free hosting option.** Many AI coding tools now have a one-click "publish" button built in.
- ☐ DAY 25 Send the live link to three people you trust. **Ask each for exactly one honest piece of feedback.**
- ☐ DAY 26 Fix whichever issue came up more than once.
- ☐ DAY 27 Write one paragraph about **why you built it and what you learned.** It makes Day 28 easy.
- ☐ DAY 28 **Post about what you built, somewhere public**, even if it feels small. **THE ONE EVERYONE SKIPS**
It's the step that actually gets you noticed.
- ☐ DAY 29 Look back at Day 1. **Notice everything you understand now** that you didn't a month ago.
- ☐ DAY 30 **Pick your next 30-day project.** You already know the shape of it now.

THE ONE RULE

*You don't need to feel ready before Day 1.
Nobody does. The plan is what makes
readiness unnecessary.*

TRACK IT • TICK A BOX A DAY

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
